Voltage Stasis Technologies

15990 South Rancho Sahuarita Blvd. Ste 218

Sauarita, AZ 85629

Voltage Stasis Technologies,

It has been a pleasure partnering with you in regards to our electrical savings. The Blackhawk Powerhouse has performed beyond your initial estimates and we are experiencing a real savings in the way of our electrical costs. Our power factor has been raised from .84 to an average of .96. Additionally, our facility is experiencing a voltage stabilization across all three phases which adds to our utility savings.

In the most recent month of testing, the Blackhawk has reduced our monthly utility bill by **12.5%** which is an increase over the first month which was a little over **10%**. These are real dollars that come off the bottom line of our electric bill. It is easy to estimate that this unit will pay for itself in approximately eight months. The first two months alone have already paid for a third of the system that you installed.

In regards to the environmental impact the results are outstanding. In the first two months alone the Blackhawk has reduced our carbon footprint dramatically. The first two months combined have resulted in **reducing the amount of carbon released into the atmosphere by 107,000 lbs.** The reduction in water used to generate electricity for our facility has also been reduced dramatically. It is estimated that we have **reduced the water usage at the electrical generating station by 178,000 gallons.** This is real water that is not being used by the utility company. These savings alone are worth the investment in the Blackhawk Powerhouse.

In regards to demand charges, we have seen them drop on each of the first two months and expect to see it drop further in the coming months based on the data from our initial test results. All of this and we now have the peace of mind that comes from knowing that our facility is protected by **50,000 volts of surge protection** that the Blackhawk Powerhouse provides.

Voltage Stasis has performed just as you said you would and your follow up has been excellent. You have communicated well with us and followed up on all things regarding the product itself and the install and implementation of the Blackhawk Powerhouse. We look forward to partnering with you on more projects to continue saving money and reducing our impact on the environment. Thanks for all of your efforts.

Sincerely,

John De Luna  
Director of Facilities
